

## Maps in Power BI

Map visuals in Power BI allow you to visualize geographic data using locations like:

- Country
- State
- City
- Postal code
- Latitude & Longitude

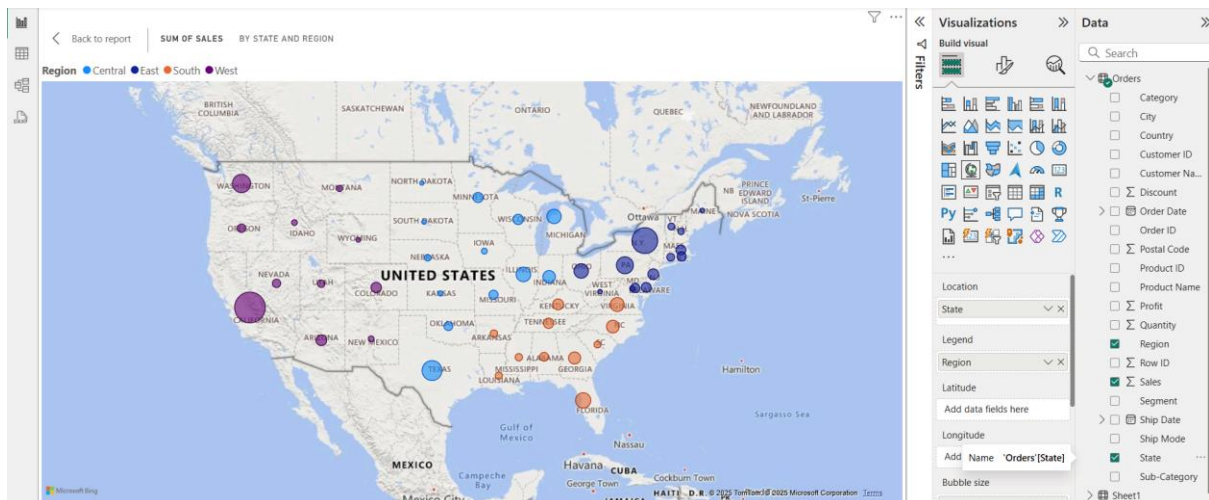

### Types of Map Visuals

#### 1. Map (Bubble Map)

Uses bubbles to represent data points on a map.

Size of bubble = value of the data.

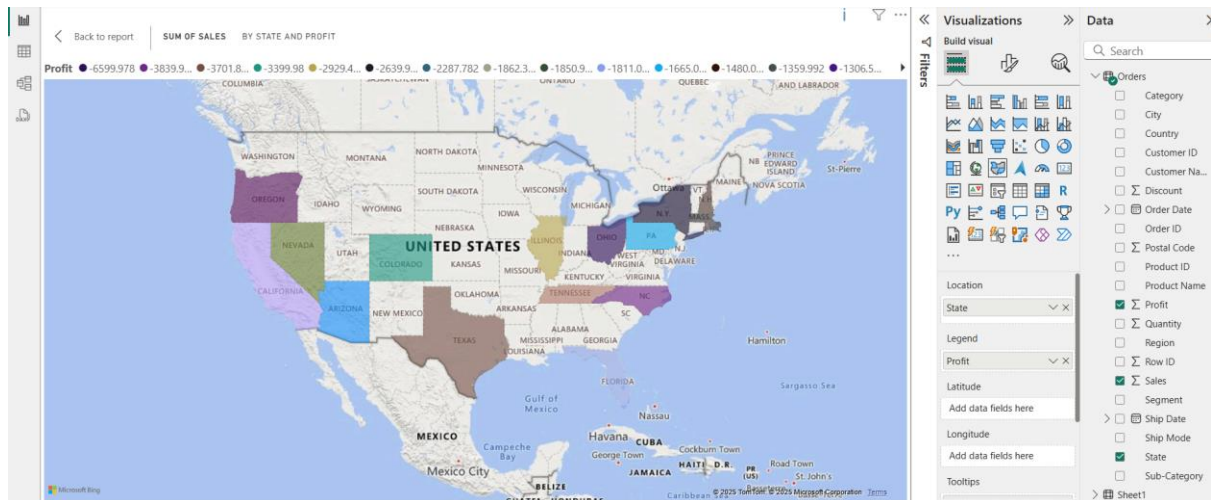

Good for comparing magnitude across locations.

#### 2. Filled Map (Choropleth Map)

Fills entire geographic regions (e.g., states, countries) with color intensity.

Useful for comparing concentration or distribution of values across regions.

## ✓ Fix: Maps and Filled Maps Are Disabled in Power BI

Enable Map Features in Power BI Settings Go to File → Options and settings → Options Under Global → Click Security

Ensure these options are enabled:

- ✓ Use Map and Filled Map visuals
- ✓ Use Bing Maps for map visuals
