

Filter on Visual

This filter works on specific Visual or chart

Ex: Selecting only Channel partners in whole graph

Basic Filters:

- Filter data based on simple conditions like:
 - Equals: Show a specific value (e.g., "Region = North").
 - Greater Than: Show values greater than a threshold.
 - Between: Filter data within a range (e.g., between two dates).
- Advanced Filters:
 - Use more complex criteria, such as Top N (e.g., top 5 products by sales).
 - Relative Date Filtering: Filter data based on relative date (e.g., last 30 days, last year).
- Filters on Measures:
 - You can filter based on DAX measures, such as showing only items with total sales greater than a certain amount

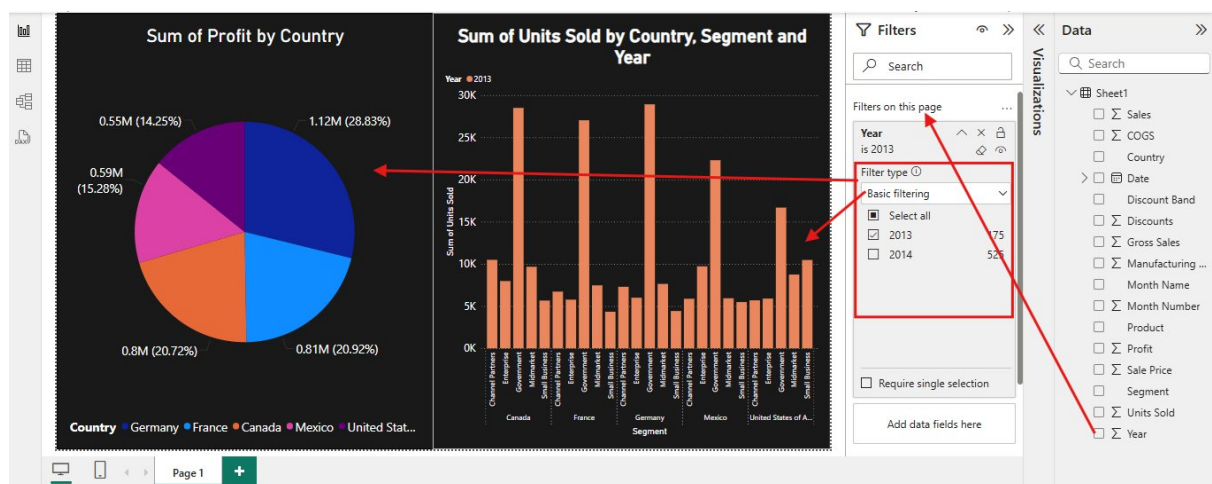

Filter on Page

This filter works on the page having collection of graph or a single graph

How to Apply a Page-Level Filter:

1. Select the report stage.
2. Open the Filters pane.
3. Drag the field you want to filter by into "Filters on this page".
4. Choose your filtering method (e.g., Basic, Advanced, Relative Date, Top N).
5. All visuals on the current page will reflect this filter.

Filter on all Pages

This works on whole work book , having multiple pages.

How to Apply a Report-Level Filter:

1. Open the Filters pane in Power BI.
2. Drag the desired field into "Filters on all pages".
3. Set filter conditions (e.g., select region, product category, or a date range).
4. All visuals across every page will reflect this filter.
