🖿 Slicers

Slicer is a visual filter in Power BI that allows users to interactively filter data in one or more visuals on a report page.

- Filter visuals by selecting values from a list, dropdown, slider, or calendar.
- Can control multiple visuals at once.
- Supports single-select or multi-select.
- Works with text, numbers, dates, and even hierarchies.

Types of Slicers:

1. List Slicer – Displays values as a checklist.

2. Dropdown Slicer – Compact, opens a dropdown list.

3. Date Slicer – Filter by between, before, after, or relative date.

4. Numeric Range Slicer – Filter numeric elds with a slider or range box.

5. Hierarchy Slicer – Drill down through categories (e.g., Year → Quarter → Month).

How to Add a Slicer:

1. Go to Visualizations pane.

2. Click on the Slicer icon.

3. Drag a eld into the Field well (e.g., Region, Product Name, Order Date).

4. Choose the slicer type (e.g., List, Dropdown, Between).
